Luca von Kannen

Prinsengracht 225D2, 1015DT Amsterdam

EDUCATION

Stuttgart Media University **Stuttgart, Germany**
Bachelor of Science in Computer Science Expected early 2025

- **GPA:** Grade: 1.57 (equivalent to GPA 3.7 on a 4.0 scale)
- **Relevant Coursework:** Algorithms and data structures, IT security, web development, computer networks, databases, software development

Amsterdam University of Applied Sciences
Exchange Semester Internet of Things Minor Present

WORK & RELEVANT EXPERIENCE

Fraunhofer Stuttgart, Germany **June – December 2022**
Institute for Production Engineering and Automation,
Student Software developer

- Developed virtual environments in Unreal Engine to simulate robots behavior using Python, C++, and Unreal's Blueprints, and collaborated with ROS to incorporate robot actions and communication with other systems.

UX-Bootcamp Antwerp, Belgium **September 2022**

- During a two-week bootcamp in Belgium, we collaborated with the Karel Grote Hogeschool to gain valuable insights into the principles of Usability and User Experience. As part of the bootcamp, we developed a museum concept and subsequently delivered a persuasive pitch before a distinguished panel of professors.

Modern Password Manager **2023**

- Built FirstPass, a secure and user-friendly password manager that offers encrypted storage of passwords using AES-256 encryption, along with the ability to generate strong passwords and store login credentials for multiple accounts and websites. The manager is built using Java for the backend and Electron for the frontend, and offers cross-platform compatibility, customizable interface with different themes, and the ability to be built from source code.

Botnet IT-Security Project **2023**

- Developed a malware framework using Rust and NestJS for the backend, with a React web interface for remote control and monitoring of infected devices. Includes an agent, backend, and frontend components for seamless integration and management of the infected devices.

IOT Weather Station **2023**

- Developed Weather Wizard, an IoT project that collects real-time weather data and provides insights into climate trends through a modern web page. The project utilized Golang for RestAPI development and database management, as well as Sendgrid, Air, and Insomnia tools for email notifications, live reloading, and testing. In addition, Weather Wizard relied on PostgreSQL and Docker for data management and Grafana for advanced data visualization.

SKILLS, ACTIVITIES & INTERESTS

Languages: English (fluent), German (native)
Technical Skills: Java, Golang, JavaScript, React, Python, C++, Rust, SQL, Linux
Interests: Cybersecurity, Bouldering, Chess
